Mulcular Infection - Liquid

Checked By: M.Masoudi###

Test:	HPV DNA Genotyping	
Method:	Qualitative Real Time PCR	
Specimen:	Genital Swab in Preservation media	
Results:	HPV DNA:	Not detected
	HPV High-Risk Genotypes: (16,18,31,33,35,39,45,51,52,56,58,59,66,68)	Not detected
	HPV Low Risk Genotypes: (6/11,26,40,42,43,44,53,54,61,62/67,69,70,71 ,74,81,82,90/91)	Not detected

Methodology:

HPV DNA extraction & purification was done out of collected sample from human cells by CE-IVD approved kit
HPV DNA High Risk & Low Risk Genotypes was evaluated by CE-IVD approved Real Time PCR Kit respectively.

HPV DNA High Risk & Low Risk was performed to detect 200 Copies/ml for all types.

Comment:

According to international guidelines performed test was covering 14 High Risk HPV Genotypes & 20 Low Risk Genotypes.

A negative low-risk and high- risk HPV result does not exclude the presence of other low- risk and high-risk HPV types.

If specimen has not been collected in our laboratory, we won't accept any responsibility of patient identity because improper labeling, handling, storage and etc. maybe occurred on specimen.
